### **DETAILED ACTION**

#### Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-15 are, drawn to a biosensor, classified in class 422, subclass
   82.01.
- Claims 16-19, drawn to a method of making a biosensor, classified in class 436, subclass 150.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group II and Group I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claims can be made by another and materially different process; the step of removing a portion of the spacer substrate to expose the electrode array can be done before being placed on the support substrate.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

During a telephone conversation with Jill Woodburn on June 26, 2003 a provisional election was made with traverse to prosecute the invention of Group I, claims 1-15. Affirmation of this election must be made by applicant in replying to this

Art Unit: 1743

Office action. Claims 16-19 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

# Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-5, 8-10, 13-15 are rejected under 35 U.S.C. 102(e) as being anticipated by Bhullar et al. (USPN 6,447,657).

Bhullar discloses a biosensor that comprises: a support substrate (fig.1, ref. 14); electrodes positioned on the support (26 and 28; col. 3, line 1-12); electrodes cooperating with one another to define electrode arrays (50; col. 3, line 47- col. 4, line 8 specifically line 6) situated adjacent to the first end; a spacer substrate (16) positioned on the support substrate; a cover (12) positioned on the spacer which defines a channel (18); each electrode being positioned in the channel adjacent to one of the ends (fig 1); the cover and support substrate are formed to an alignment together (concave fig. 7, fig. 4-10); the spacer includes a first member (80).

Application/Control Number: 09/866,030

Art Unit: 1743

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ-459-(1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims **5**, **6**, **11** and **12** are rejected under 35 U.S.C. 103(a) as being unpatentable over Bhullar et al. (USPN 6,447,657).

Bhullar discloses a biosensor as discussed above.

Bhullar does not discloses a second member and a third member that are part of the spacer being located between opposite end and the sample inlet.

It would have been obvious to on having an ordinary skill in the art at the time to modify Bhullar to include additional spacer for aiding in sample migration (col. 5, lines 31-49).

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Samuel P Siefke whose telephone number is 703-306-0093. The examiner can normally be reached on M-F 7:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jill A. Warden can be reached on 703-308-4037. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9311 for regular communications and 703-872-9310 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0661.
